

Bat Myths and Truths

Myth: Bats are just flying mice.

Truth: Bats are not rodents. Bats are classified in their own order of mammals called Chiroptera, which translates as “hand-wing.”

Myth: All bats have rabies.

Truth: All mammals can contract rabies; however the vast majority of bats do not. Bats that contract the virus die from the disease. Never pick up, handle or play with a bat.

Myth: Bats get tangled in your hair.

Truth: Bats don't build nests and have little interest in our hair.

Myth: Bats attack people.

Truth: Bats are afraid of humans and try to stay away from people as best they can.

Myth: Bats suck blood.

Truth: Only 3 of the more than 1,300 kinds of bats in the world are vampire bats. And even those don't “suck” blood, but lap it like a cat laps milk. Vampire bats live in Mexico, Central America and South America.

Myth: Bats are pests.

Truth: Bats are the ones that *eat* the pests—insects! One insect-eating bat can eat $\frac{3}{4}$ of their body weight in insects in one night.

Myth: Bats are dirty.

Truth: Bats groom themselves just like cats and are very clean.

Myth: Bats are blind.

Truth: All bats can see. Many types of bats have small eyes and use echolocation to navigate, but they aren't blind.

DRAW A PICTURE

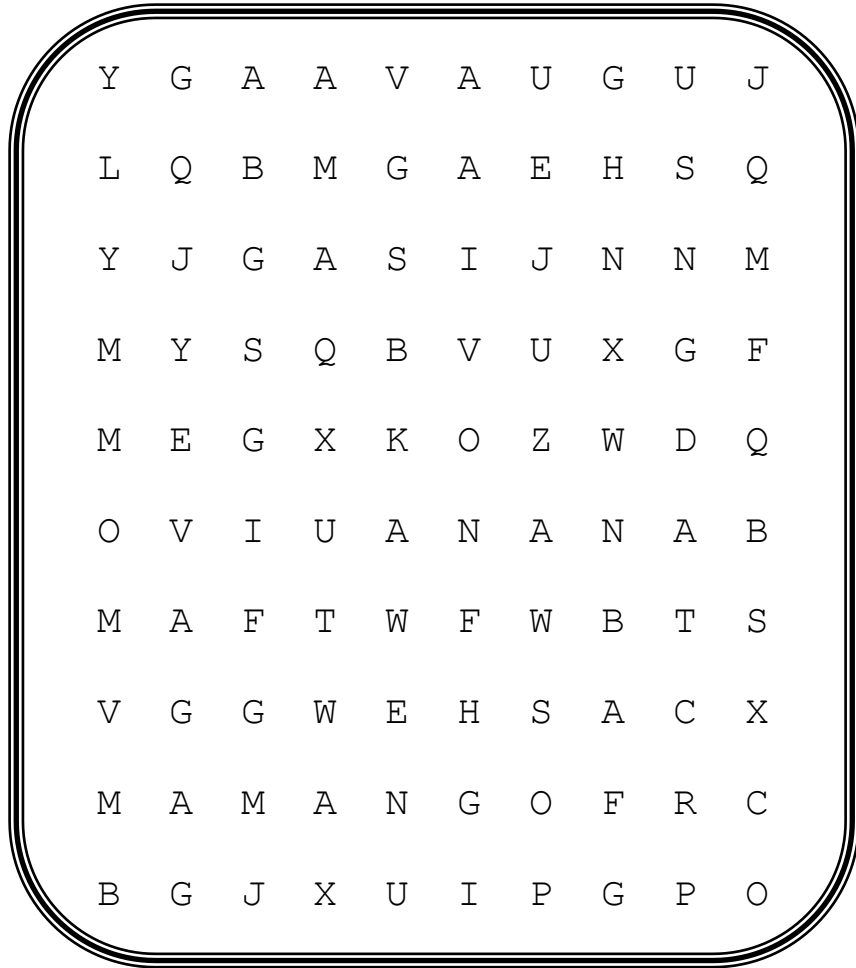

Bats are the only pollinators of the agave plant. Agaves grow beautiful yellow flowers and provide juice and sugar. Finish the picture by drawing a mirror image of the bat with the agave plant.

WORD SEARCH

Did you know that 500 plant species rely on bats to pollinate their flowers? Find and circle the 10 plant words hidden in this puzzle. All these plants rely on bats.

Words may be found across, down and diagonally.

1. Banana
2. Mango
3. Guava
4. Shea

5. Figs
6. Baobab
7. Agave
8. Cashew

CONNECT THE DOTS

Connect the dots to create a picture. Start at 1, then 2 and 3.

COLOR BY NUMBER

Color Code

1 = Brown
4 = Red

2 = Black
5 = Green

3 = Yellow
6 = Blue

POLLINATOR MAZE

Mexican long-tongued bats love to drink lots of nectar from agave and saguaro cactus flowers. Help the hungry long-tongued bat find his flower buffet!

CROSSWORD

Solve the crossword using the clues below that describe characteristics of bat-pollinated flowers.

Across

- 2. dry ecosystem with lots of sand and cactus
- 5. strong smell
- 6. very light-colored

Down

- 1. sweet liquid pollinating bats love
- 3. opposite of daytime
- 4. big

BATVENGER HUNT

1. Can you find a pollinating bat?
 (Hint: look at pictures and videos)

a. How do they gather nectar? (Circle correct answers)

- TONGUE
- PROBOSCIS
- HAIR
- FINGERS

b. How do they transfer pollen from flower to flower? (Circle the correct answer)

- FUR
- FEATHERS
- SCALES
- SUITCASE

2. Look for a flower that is bat-pollinated. Draw it here:

a. Circle two characteristics of a bat-pollinated flower:

- Opens in Day
- Light-colored
- Opens at Night
- Dark-colored

b. Flowers make themselves attractive to their pollinators. What would a flower need to attract you to it to make you a "You-Pollinator"?
 (Example: Smells like cotton candy, colors like pink)

3. Can you find 2 things people use that are products of bat pollination?
 Draw them here:

Which is your favorite?

BATS!

Cross out the word BATS every time you see it in the box. When you reach a letter that does not belong, write it in the circles below to reveal the secret message.

BATSBBATSEBATSABATS
 BATSBBATSABATSTBATS
 BATSHBATSEBATS RBATS
 BATSOBATSSBATSABATS
 BATSVBATSEBATSBBATS

○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○

DID YOU KNOW?

One of the biggest threats to pollinating bats is habitat loss. Their habitat is made up of their food, water and somewhere to sleep or hide. Development is a major cause of the loss of their habitat.

What do you think would happen if there were less or even no bat pollinators?

What do you think you could do to help bat pollinators?
