Emergency Rules

- Immediately upon filing.
- Later (specify)

Any other findings required by other provisions of law as precondition to adoption or effectiveness of rule?

- Yes
 - No
- If Yes, explain:

Purpose: Chronic Wasting Disease (CWD) is a fatal neurologic disease of cervids including deer, elk, moose, and caribou. It is caused by infectious proteins called prions that are transmitted directly from animal to animal or indirectly through environments. There is no cure or vaccine for CWD, and the disease is always fatal. It can only be confirmed through testing of an animal's lymph nodes or brainstem tissue. The purpose of the rule is to aid in sample collection, reduce the concentration of animals and reduce the likelihood of disease transmission through transportation of carcasses. The emergency rules also prohibit scents that could contain cervid urine or glandular tissue in the area surrounding the detection as these scents can contain the disease.

EMERGENCY RULE

Under RCW 34.05.350 the agency for good cause finds:

- That immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.
- That state or federal law or federal rule or a federal deadline for state receipt of federal funds requires immediate adoption of a rule.

Reasons for this finding: Recently, CWD cases have been confirmed in Washington state. As a result, testing for the disease and limiting the potential spread of the disease are now more important than ever. These emergency rules are intended to increase testing by making it mandatory to test salvaged and harvested animals in the area surrounding the detection. Also to reduce the potential spread of the disease, emergency rules will prohibit the transportation of deer, elk and Moose from the region surrounding the detection area and prohibit baiting during hunting in the area near the detection. The effect of CWD is always fatal on cervids.
