EIGHT CK/UPR CHEHAL

All marked returning hatchery adults will be removed and surplused.

All fish released will be adipose clipped prior to release.

Chehalis winter steelhead project previously listed at 55 pair, but is currently functioning at 15 pair. Project will continue at this rate until the broodstock adult mortality issue is at acceptable levels, with concurrence by WDFW Chief Fisheries Scientist, Complex Manager, and the Regional Fish Program Manager.

All Coho destined for yearling production will be mass marked with an adipose fin clip.
 Funded through Mitchell Act.

Transfers of appropriate stocks of Fall Chinook and Coho, as outlined in the stocks transfer guidelines, may take place among lower Columbia River facilities in order to meet production goals.

Survival data over the past years has shown that Spring Chinook reared at Gobar pond survive at 4 times the rate of the fish reared at the Fallert Creek Hatchery.

The goal of the Spring Chinook program is to restore NF Spring Chinook to a self-maintaining, naturally spawning run capable of providing harvestable numbers of fish (Natural management). All Spring Chinook will be AD Clipped except for 1/2 of the DIT. All Spring Chinook planted above the barrier in the NF Nooksack must be maintained on the regulated pathogen-free water and have had 100% of parents tested and found negative for viral pathogens. All Steelhead and yearling coho will be mass marked with an adipose fin clip. On-station Chum production eliminated.
