## Introduction

---

This booklet is organized into two sections: First - the ponds and lakes receiving catchable trout in 2007, and the kokanee and trout fry species and numbers stocked in 2005 and 2006; and Second – the stream catchable trout stocking table. These sections list the waters by county, and show the trout species, the numbers, size, and approximate time to be stocked. The locations, dates, and times presented are based on current information, so unavoidable changes may occur.

The 2007 Washington Triploid Trout distribution schedule is appended at the end of the document.

### Catchable Trout Plants

Nearly 4.1 million trout, 7 inches or larger, are scheduled to be stocked in 356 Washington lowland lakes this year. These plants include nearly 38,800 quality “jumbo”-sized rainbow and cutthroat trout, as well as larger brood stock trout, being released from WDFW hatcheries into these lakes. These, combined with the triploid trout noted below, will provide opportunities for larger trout in selected lakes. About 57,000 catchable-sized trout are planned for stocking in selected streams to provide mitigation for lost opportunity to harvest wild fish, or to provide recreational opportunity in areas where habitat does not support wild trout populations.

### Triploid Trout

There are 95 lakes and ponds throughout the state that will be stocked with 73,460 triploid trout that average 1-½ pounds. These trout, purchased by the Department, are sterile rainbows that have the potential to grow to trophy size if abundant food is available, and if not harvested the first season after stocking. These fish are not “genetically modified,” but are sterilized by heat- or pressure-treating the eggs after fertilization. The triploid rainbow trout are identified as TRB under the Species in the catchable trout table. Some triploid trout fry are stocked in areas where natural reproduction of hatchery trout could adversely affect native species.

## **Trout Fry Plants**

Nearly 18 million fry and fingerlings were stocked as 2-to-5 inch long trout into 581 lakes and ponds. Kokanee were stocked in 2005 for the 2007 fishery, while trout were stocked in 2006 for this year's catch. Fry are stocked in the spring and fall, where they feed and grow on natural food until the following spring when they are large enough to be harvested. The survival rate of fry varies depending on the lake. A number of eastern Washington lakes are managed in such a way that fry survival is very good and are the primary source of new trout available for harvest. Western Washington lowland lakes depend primarily on catchable size trout plants because of relatively low fry survival. Where fry are stocked, the ones that survive supplement the catchable trout plants.

## **Some Tips for Catching Trout**

As you read through the stocking tables, please note that many lakes are open year-round, or open on March 1, and are stocked as early as January. While it may be too late this year to take advantage of this knowledge, stocking schedules are fairly consistent from year-to-year, so you can plan to get in some good early season fishing next year.

Research has shown that trout tend to stay in the top three to five feet of water for the first weeks after stocking. This makes them easy prey for cormorants and other avian predators, which can take a significant bite out of our stocking efforts. Where avian predation is prevalent, your best chance for success may come in the first couple of weeks after trout are stocked. Angler activity tends to disrupt the feeding birds and can save the fish for a longer period of good fishing.

Because of this tendency of stocked trout to remain shallow for a while after stocking, fishing on the bottom may not be as productive early as it will be later. Troll shallow with small lures, flies, or spinner-and-bait combinations early in the season. When fishing from shore, use a float to keep your bait up in the feeding zone.

After a few weeks, the trout will cue in on natural food items and be found where the food is, and this tends to be deeper. At this time, try fishing on or just off the bottom, using floating paste type baits or other buoyant baits. Also, natural baits such as worms, fish eggs, or flies and lures that imitate natural trout food work well. This will also be the case in lakes managed primarily with fry plants where the fish have grown up on natural food.

<b>Whitman</b>	Union Flat Creek	RB	1,500	May

BT = Brown Trout

RB = Rainbow trout

## 2007 Washington Triploid Trout Distribution

Approved by the Fish & Wildlife Commission

February 16, 2007

Ninety-five waters throughout the state will be stocked with triploid trout averaging 1-½ pounds each. These trout, purchased by WDFW, are sterile rainbows that are voracious feeders and have the potential to grow to trophy size if not harvested the first season after stocking and if sufficient forage is easily available. A total of 73,460 triploid trout will be stocked, mostly in April, and as close to the April 28 lowland lakes fishing season opener as possible. Later in May, thirty lakes will receive additional triploid plants to extend the opportunity to catch one.

For the 2007 stocking schedule, seven lakes were removed from the list, and seven added this year. These changes were made to improve the distribution and mix of the triploid fish, relative to other hatchery trout plants.

### 2007 Washington Triploid Trout Distribution

County	Lake Name	Number	Approximate time to be stocked
Benton	Columbia Park Pond	130	April
Chelan	Wapato Lake	682	April
Clark	Klineline Pond	1,077	April
