Hatchery Catchable Trout Stocking Plan for Washington Streams..... 32

2009 Washington Triploid Trout Distribution 33

Introduction

WDFW is planning to stock a total of 782 lakes to provide for the 2009 trout fisheries, and we hope you enjoy your days on the water with your friends and family.

This booklet is organized into two sections: First - the ponds and lakes receiving catchable trout in 2009, and the kokanee and trout fry species and numbers stocked in 2007 and 2008; and Second – the stream catchable trout stocking table. These sections list the waters by county, and show the trout species, the numbers, size, and approximate time the fish will be stocked. The locations, dates, and times presented are based on current information, so unavoidable changes may occur.

Catchable Trout Plants

Over 4.2 million trout, 8 inches or larger, are scheduled for stocking in 370 Washington lowland lakes this year. These plants include nearly 70,000 quality “jumbo”-sized (1½ to 2 pound average) rainbow and cutthroat trout, as well as larger brood stock trout, being released from WDFW hatcheries into these lakes. These, combined with the triploid trout noted below, will provide opportunities for larger trout in selected lakes. WDFW plans to stock about 58,600 catchable-sized trout in selected streams to provide mitigation for lost opportunity to harvest wild fish, or to provide recreational opportunity in areas where habitat does not support wild trout populations.

Anglers should expect changes from this plan due to logistics, and modifications to hatchery production, as well as the ability to plant out brood stock or excess fish. At times, trout may be stocked in addition to what was planned in this document. Every Thursday, WDFW provides a weekly stocking report for catchable trout at: <http://wdfw.wa.gov/fish/plants/weekly>

Triploid Trout

There are 94 lakes and ponds throughout the state that will be stocked with 41,429 triploid trout that average 1½ pounds. These trout, purchased by the Department from private growers, are sterile rainbows that have the potential to grow to trophy size if abundant food is available, and if not harvested the first season after stocking. These fish are not “genetically modified,” but are sterilized by heat- or pressure-treating the eggs after fertilization. These triploid rainbow trout are identified as TRB under the Species in the catchable trout table. Some triploid trout fry are stocked in areas where natural reproduction of hatchery trout could adversely affect native species. For specifics on the triploid stocking program, please refer to the Washington Triploid Trout distribution schedule for triploid trout stocking, appended at the end of the document on page 33.

Trout Fry Plants

Over 15.5 million fry and fingerlings were stocked as 2-to-5 inch long trout into 531 lakes and ponds, including 163 high lakes. Kokanee were stocked in 2007 for the 2009 fishery, while trout fry were stocked in 2008 for this year's catch. Fry and fingerlings are stocked in the spring and fall, where they feed and grow on natural food until the following spring when they are large enough to be harvested. The survival rate of fry varies depending on conditions of the lake. A number of eastern Washington lakes are managed in such a way that fry survival is very good and are the primary source of new trout available for harvest. Western Washington lowland lakes depend primarily on catchable size trout plants because of relatively low fry survival. Where fry can be successfully stocked, the ones that survive supplement the catchable trout plants.

Some Tips for Catching Trout

As you read through the stocking tables, please note that many lakes are open year-round, or open on March 1, and may be stocked as early as January. While it might be too late this year to take advantage of this knowledge, stocking schedules are fairly consistent from year-to-year, so you can plan to get in some good early season fishing next year.

Research has shown that trout tend to stay in the top three to five feet of water for the first weeks after stocking. This makes them easy prey for cormorants and other avian predators, which can take a significant bite out of our stocking efforts. Where avian predation is prevalent, your best chance for success may come in the first couple of weeks after trout are stocked. Angler activity tends to disrupt the feeding birds and can save the fish for a longer period of good fishing.

Because of this tendency of stocked trout to remain shallow for a while after stocking, fishing on the bottom may not be as productive early as it will be later. Troll shallow with small lures, flies, or spinner-and-bait combinations early in the season. When fishing from shore, use a float to keep your bait up in the feeding zone.

After a few weeks, the trout will cue in on natural food items and be found where the food is, and this tends to be deeper. At this time, try fishing on or just off the bottom, using floating paste type baits or other buoyant baits. Also, natural baits such as worms, fish eggs, or flies and lures that imitate natural trout food work well. This will also be the case in lakes managed primarily with fry plants where the fish have grown up on natural food.

Hatchery Trout Stocking Plan for Washington Lakes

2009 Catchable Trout Stocking Plan

Hatchery Trout Fry Stocked in 2008

Kokanee Fry Stocked in 2007

Please consult the *Fishing in Washington* sport fishing regulation pamphlet for seasons, bag limits, and special regulations.

2009 Washington Triploid Trout Distribution

Approved by the Fish & Wildlife Commission March 20, 2009

Ninety-four lakes throughout the state will be stocked with triploid trout weighing an average 1-½ pound each. These trout, purchased by WDFW from a contracted private grower, are sterile rainbows that are voracious feeders and have the potential to grow to trophy size if not harvested the first season after stocking, and if sufficient forage is easily available.

Triploid plants are one of the components of the overall stocking program, and the District fish biologists use them in the mix of fry plants, catchables, triploids, and WDFW 'jumbos' depending on the specific circumstances of each lake, and the availability of hatchery fish.

A total of 35,336 triploid trout will be stocked in April, and as close to the April 25 lowland lakes fishing season opener as possible. Later in May, twenty-nine lakes will receive additional triploid plants, bringing the total stocking of triploids to 41,429 fish. There are 767 fewer triploids available in 2009 due to increased cost to the Department.

The list of lakes proposed for stocking is similar to the 2008 plan, with a few changes to enhance fishing opportunities, and to augment lakes that were rehabilitated last fall.

County	Lake Name	Number	Approx. time of stocking
Adams and Lincoln	Sprague Lake	2,165	April
Benton	Columbia Park Pond	147	April
Chelan	Roses Lake	1,001	April
Clark	Battle Ground Lake	256	April
	Klinline Pond	256	April
Cowlitz	Horseshoe Lake	608	April
	Kress Lake	352	April
	Merrill Lake	224	April
Douglas	Jameson Lake * See note	1,437	April
Franklin	Dalton Lake	393	April
	Powerline Pond	344	April
Grant	Blue Lake	295	April
	Deep Lake	98	April
