Salmon Identification

OCEAN PHASE

Chinook Salmon

Large black spots on back, dorsal fin, and both the upper and lower lobes of the tail. Black mouth with a black gum line and large prominent teeth. Silver pigment on the tail.

Coho Salmon

Black spots on back with spots only on the upper portion of the tail. White mouth with a white gum line, a dark tongue, and medium-sized teeth. Average size scales. Silver pigment on the tail.

Chum Salmon

No prominent spots on back or tail (small speckles may be present). White mouth with a white gum line, a dark tongue, and well developed teeth. Calico markings (vertical bars), but faint on bright fish. Silver pigment on the tail.

Pink Salmon

Generally large black spots on back and heavy oval shaped black blotches on the upper and lower lobes of the tail. White mouth with a black gum line and tongue. Very small scales. No silver pigment on the tail. Few if any teeth present.

Sockeye Salmon

No prominent spots on back or tail (small speckles may be present). White mouth with a white gum line, a dark tongue, and almost toothless. Average size scales. Prominent gold-colored eyes. No silver pigment on the tail. Small teeth.

SPAWNING PHASE

Chinook Salmon

Chinook salmon do not display the conspicuous morphological changes of pink, chum and sockeye salmon during the spawning stage. Typically Chinook turn from silvery bright ocean coloration to a darker bronze color. Large spots are found on the back and both lobes of the tail. Mouth is black with a black to grey gum line.

Coho Salmon

Mature coho salmon display a greenish-black head with a red to maroon colored body. Spots are found on the back and only upper lobe of the tail. The mouth is black with a white gum line. Typically male coho display brighter coloration and have a more pronounced elongated hooked snout.

Chum Salmon

Chum salmon display characteristic olive-green vertical markings on the sides of the body as they approach spawning. There are no spots on the back or tail. Male chum salmon develop a more elongated snout with large canine-like teeth and also have reddish-purple vertical markings in addition to the olive-green markings.

Pink Salmon

The majority of pink salmon return on odd-numbered years. Pink salmon have large oblong spots on the back and both lobes of the tail. Pink salmon, like most other salmon transform from silvery bright ocean coloration to a more dull and darker color. Males develop a pronounced hump as they approach spawning.

Sockeye Salmon

Sockeye turn brick red to scarlet red along their body with a greenish head. Female coloration is often more dull colored. There are no distinct spots on the back or tail. Sockeye can be found spawning in both lakes, streams, and rivers, while other Pacific salmon spawn in streams and rivers.

Atlantic Salmon

Male Atlantic salmon

Female Atlantic salmon

Atlantic salmon have large black spots on the gill covers and back, and rarely any spots on the tail fin. Their scales are large, there is no red stripe along the lateral line, and they have 8-10 anal fin rays. Atlantic salmon may be taken from marine waters during any open salmon season, and from anadromous (not landlocked) freshwater during any open salmon or trout season. Anglers may not, however, continue to fish for Atlantic salmon after a daily limit of another species of salmon has been retained. In landlocked lakes, Atlantic salmon may be taken as part of the trout daily limit. Seasons and size limits in place for trout apply to Atlantic salmon in landlocked lakes. Opportunities to harvest Atlantic salmon beyond those listed in the pamphlet will be announced to the news media and carried on WDFW's recreational fishing hotline. Please report sightings to (360) 902-2700.

Chinook, Coho, and Pink Salmon Identification

Chinook

Jaw- dark mouth and black gums at the base of its large, sharp teeth. Immature Chinook are known as a "blackmouth."

Tail- both the upper and lower lobes of the tail are covered with spots and silver is prominent.

Coho

Jaw- mouth is white and the gum line is almost white, but the tongue may be black. The medium-sized teeth are sharp.

Tail- has just a few scattered spots, usually on the upper lobe, with silver streaks. Base of tail is wide.

Pink

Jaw- mouth of a pink is white, but the gums and tongue are black, as they are in a Chinook. It does not have "teeth" on its tongue.

Tail- is covered with large oval spots. It does not have silver on the tail. The scales are very small compared to other salmon.

Wild/Hatchery Identification

In order to provide salmon and steelhead fishing opportunities, WDFW and the Tribes have marked salmon and steelhead by clipping the adipose fin (a small fatty fin directly behind the dorsal fin). In areas designated "release wild <insert fish name>", fin-clipped salmon and steelhead are the only fish that may be retained. The picture to the right shows a wild salmon and a fin-clipped or hatchery salmon. Please be careful in releasing wild fish— they are your fishing future! For tips on the best way to release fish, please see page 5. In Marine Areas 5-13, it is illegal to bring a wild salmon or a species of salmon aboard a vessel if it is unlawful to retain those salmon. "Aboard a vessel" is defined as inside the gunwale. In Marine Area 2-2, it is unlawful to totally remove salmon from the water if it is illegal to retain those fish, except anglers fishing from boats 30' or longer are exempt. Learn more by visiting:

<https://wdfw.wa.gov/fishing/salmon/identification.html>

Hatchery Salmon
Adipose fin has been clipped – leaving a healed scar in its place.

Wild Salmon
Intact adipose fin.

Marine Area Rules

1 • • • • Season and Daily Hours:

During an open season, marine waters are open 24 hours per day, except as noted for night closures.

2 • • • • Quota Management:

SALMON, HALIBUT, and some SHELLFISH are managed by quotas in many marine areas. These fisheries close when the quotas have been taken. Closures will be announced to local news media and will be included in the Fishing Hotline and Shellfish Rule Change Hotline messages.

NOTE: Emergency rules may occur throughout the year and will supersede the rules contained in this pamphlet. Changes can be found by calling the WDFW Fishing Hotline (360) 902-2500 or Shellfish Rule Change Hotline (866) 880-5431, contacting statewide customer service (360) 902-2700, or by visiting the WDFW website <https://wdfw.wa.gov>.

Rules listed below are General Rules. Specific Area Rules are listed by area (pages 100-123).

Species Rules

Hatchery **STEELHEAD** may be caught and released until the daily limit is retained. If a fish has swallowed the hook or is hooked in the gill, eye, or tongue, it should be kept if legal to do so. Wild **STEELHEAD** must be released.

SALMON - Single-point barbless hooks and a hand-held rod and line must be used.

In Areas 5-13, it is illegal to bring a wild **SALMON** or a species of **SALMON** aboard a vessel if it is unlawful to retain those **SALMON**. "Aboard a vessel" is defined as inside the gunwale. Also see special Handling Rule for Area 2-2 east of the buoy 13 line.

WHITE STURGEON - Only one single-point barbless hook and bait is allowed when fishing for **STURGEON**. Catch-and-release open year-round. Green **STURGEON** may not be retained.

HALIBUT - Hook and line angling and spearfishing only. A hand-held line is permitted. Only one line with up to two hooks may be used. **HALIBUT** may be shot or harpooned while landing. May not be landed in a port closed to **HALIBUT** fishing except **HALIBUT** lawfully caught in Canada; angler must have Canadian license. See page 4, *Fish & Shellfish caught in Canada*.

BOTTOMFISH, TUNA, AND MACKEREL -

Hook and line angling, spearfishing, and bow and arrow fishing only. May not retain, possess, or land **BOTTOMFISH** from Oregon that do not comply with the regulations for the area where the fish are landed. See **BOTTOMFISH** definition page 10.

ROCKFISH - You may not land **YELLOWEYE** rockfish into any port in Washington. Unlawful to fish for, retain, or possess rockfish in Areas 6-13.

FORAGE FISH - Forage fish jig or forage fish dip net only except **ANCHOVY** and **SARDINE** may be taken by a cast net in Areas 1-4. Only one net may be used at a time. Dip net gear must be held by the rigid handle at all times and may not be used from a vessel while under power. Cast net gear must be in immediate control at all times with retrieval cord in hand. Anglers with the reduced-fee license or a Designated Harvester Card may use a forage fish dip net with a hand-operated gate. Jig gear may have up to three treble hooks or nine single-point hooks, not to exceed $\frac{3}{8}$ " between point and shank. While fishing in Areas 5-11 & 13, a second line using forage fish jig gear may be used to fish for forage fish.

You may use forage fish jig gear in Columbia River waters from the Buoy 10 line to the Rocky Point/Tongue Point line.

Derelict Fishing Gear

Report lost or abandoned commercial nets or pots

There are no penalties associated with reporting lost commercial fishing gear.

The Derelict Fishing Gear Removal Project is a no-fault program. The goals are simply to remove lost and abandoned commercial gear, to help restore Puget Sound, to improve public safety, and to assist species recovery.

Nets are dangerous! Never attempt to remove them. Divers, stay a safe distance away.

Still Fishing After All These Years

Lost and abandoned commercial fishing gear continues to fish, impacting marine animals and destroying their habitat, entangling divers, and damaging propellers and rudders of boats.

What's being done?

Federal, state, tribal, and local governments, NGOs, and grassroots organizations and individuals are collaborating to protect and restore Washington marine resources by locating and removing harmful commercial derelict fishing gear.

How can you help?

Record as much information as you can when you find commercial derelict gear, including:

- Date of sighting
- Type of gear
- Approximate water depth
- General location
- Latitude (example 48.34333)
- Longitude (example -123.00333)

PROTECT WASHINGTON'S ROCKFISH

Rockfish are an incredibly diverse and important group of marine fish in our Pacific waters. A number of species are in low abundance in both Puget Sound and the Washington coast. To aid their recovery, fisheries in these areas have ended or been restricted. Read on to learn how you can help conserve Washington's rockfish.

See the WDFW web page for more information:
<https://wdfw.wa.gov/fishing/bottomfish/rockfish/mortality.html>

SEND THAT FISH DOWN

As fish are brought to the surface, gases in the swim bladder expand causing the stomach and eyes to bulge. This is known as **barotrauma**.

Notice the everted stomach and bulging eyes.

IDENTIFY AND REPORT

CANARY
 3 orange stripes across head. Lateral line in clear gray zone & orange mottling.

YELLOWEYE
 Brilliant yellow eye & raspy ridges above eye. Fins usually have black edges.

BOCACCIO

Lower jaw greatly projecting & elongated body.

VERMILION

Reddish & mottled with gray.

Rockfish can be challenging to identify. Anglers are encouraged to learn key features and use picture references to aid identification. **Accurately identify and report all caught & released rockfish.** Data from recreational anglers are critical to scientific evaluations that determine population health. Report all rockfish caught and released to WDFW port samplers. **Support rockfish conservation.** Be an informed angler; support the continued survival of rockfish by knowing how to properly identify, report, and, if necessary, release these species.

Sending fish with barotrauma to their caught depth recompresses them, improving their ability to stay down. There are several devices that you can use:

DEPTH PRESSURE RELEASE

These devices grasp the fish on the jaw and release automatically once your desired depth is reached.

INVERTED HOOK

An inverted barbless hook is inserted in the lower lip. Once back to depth, release the fish with a sharp jerk on the line.

BOTTOM CONTACT RELEASE

A weight secures the grip as the fish descends. Once the weight contacts the sea floor, it releases the fish.

DO NOT VENT

Puncturing the fish's swim bladder or bulging organs is not recommended as it can cause serious injury or introduce infection.

tips

- **Protect sensitive species by avoiding them-** if you are fishing in an area where you are catching fish you can't keep, it's best to move to another location.
- **Get the rockfish down quickly-** have your descending device ready to use. **Fish returned to depth within 2 minutes have a much better chance of survival.**

- **Avoid rough handling-** avoid dropping fish; touch fish as little as possible. Use a wet towel or wet your hands to avoid removing the protective slime coat.
- **Return fish back to the depth of capture or at least 60 feet.**
- **Use the descending device that works for you-** consider the fishing location, depth, and type of boat you have.
