1) SITE WEIGHTS	81
2) CWT RECOVERIES	85
3) Marine Area 7 On-The-Water Survey	116

LIST OF TABLES

Table 1.1 Sampling/estimation details on target parameters associated with the overall Area 5 summer mark-selective fishery monitoring program.....	3
Table 1.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 summer Chinook MSF in Marine Area 5. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	4
Table 1.3 Number of total length samples collected from retained Chinook salmon collected during dockside angler interviews in the 2018 summer Chinook MSF in Marine Area 5	4
Table 1.4 Total Chinook salmon encountered (retained and released) by charter and private-boat anglers logging their trips on VTRs, with estimates of legal-size and overall (legal and sublegal) mark rates during 2018 summer Chinook salmon MSF in Marine Area 6. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.....	4
Table 1.5 Summary of season-wide fishery impact estimates for the 2018 summer Chinook MSF in Marine Area 5. Release mortality rate = 0.15 for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	6
Table 1.6 Comparison of modeled and estimated total Chinook encounters for the 2018 summer Chinook MSF in Marine Area 5. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	6
Table 1.7 Comparison of modeled and estimated total Chinook mortalities for the 2018 summer Chinook MSF in Marine Area 5. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	6
Table 1.8 Summary of the total number of anglers intercepted during on-the-water surveys conducted for the 2018 summer Chinook MSF in Marine Area 5. Sites in bold represent those included in the dockside sample frame.....	8
Table 1.9 Monthly sample rates (Total retained Chinook sampled ¹ / Estimated retained Chinook) for the 2018 summer Chinook MSF in Marine Area 5. AD = marked (adipose-clipped), UM = unmarked.....	8
Table 1.10 Fishery-total estimates of retained and released salmon (<i>other than Chinook</i>) for the 2018 summer Chinook MSF in Marine Area 5. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.	8
Table 1.11 Summary of coded-wire tags recovered from Chinook salmon harvested during the 2018 summer Chinook MSF in Marine Area 5. The field “Number DITs” corresponds to the number of tags that belonged to double-index tag groups.....	9
Table 1.12 Summary of double-index tagged (DIT) Chinook kept by anglers, and estimated total mortality of unmarked DIT Chinook due to hook-and-release impacts resulting from the 2018 summer Chinook MSF in Marine Area 5. AD = marked (adipose-clipped), UM = unmarked.	10
Table 1.13 Season-total estimates of Chinook encounters by size/mark-status and total estimates of angler effort, summarized for all seasons to date of the Area 5 summer Chinook MSF. Values may not add exactly due to rounding error.	10
Table 2.1 Sampling/estimation details on target parameters associated with the overall Area 6 summer mark-selective fishery monitoring program.....	12
Table 2.2 Observations of fishing effort, Chinook salmon retained, and reported Chinook salmon releases, by week, for the summer Chinook salmon MSF in Marine Area 6. Note: displayed	

values are sample observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status, UD = undetermined mark-status.....	13
Table 2.3 Observations of fishing effort, salmon retained (other than Chinook), and reported salmon releases (other than Chinook), by week, for the summer 2018 Chinook salmon MSF in Marine Area 6. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status, UD = undetermined mark-status.....	13
Table 2.4 List of sites sampled with the number of sampling events (site-days) during the summer 2018 Chinook salmon MSF in Marine Area 6.....	13
Table 2.5 Summary of total length samples from retained Chinook salmon collected during dockside angler interviews in the 2018 summer Chinook MSF in Marine Area 6.....	15
Table 2.6 Total Chinook encountered (retained and released) by private-boat anglers logging their trips on voluntary trip reports (VTRs) during the 2018 summer Chinook MSF in Marine Area 6, with estimates of legal-size and overall (legal and sublegal) mark rates. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses	15
Table 2.7 Summary of coded-wire tags recovered from Chinook salmon harvested during the 2018 summer Chinook MSF in Marine Area 6. The field “Number DITs” corresponds to the number of tags that belonged to double-index tag groups.....	16
Table 3.1 Sampling/estimation details on target parameters associated with the overall Area 7 Chinook MSF monitoring program.....	18
Table 3.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 Summer Chinook MSF in Marine Area 7. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	19
Table 3.3 Number of total length samples collected from retained Chinook salmon collected during dockside angler interviews in the Area 7 Chinook MSF.....	19
Table 3.4 Summary of season-wide fishery impact estimates for the 2017 summer Chinook MSF in Marine Area 7. Release mortality rate = 0.15 for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	21
Table 3.5 Comparison of modeled and estimated total Chinook salmon encounters for the 2018 summer Chinook MSF in Marine Area 7. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	21
Table 3.6 Comparison of modeled and estimated total Chinook salmon mortalities for the 2018 summer Chinook MSF in Marine Area 7. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	21
Table 3.7 Summary of aerial survey and dockside data used to estimate the fraction of effort captured in the three-site sample frame during the 2018 summer Chinook salmon MSF in Marine Area 7. See Methods Report (WDFW 2012a) for computational details and notation.	23
Table 3.8 Monthly sample rates (Total retained Chinook sampled ¹ / Estimated retained Chinook) in the 2018 summer Chinook MSF in Marine Area 7.....	23
Table 3.9 Composition of test fishery Chinook encounters and associated mark-rate and size/mark-status proportion estimates from the 2018 summer Chinook MSF in Marine Area 7. AD = marked (adipose-clipped), UM = unmarked.....	23

Table 3.10 Total Chinook encountered (retained and released) by private-boat anglers logging their trips on VTRs, with estimates of legal-size and overall (legal and sublegal) mark rates during the 2018 summer Chinook MSF in Marine Area 7. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.....	24
Table 3.11 Summary of dockside creel observations of kept Chinook and reported released of Chinook by mark status during the 2018 summer Chinook MSF in Marine Area 7 by mark-status	25
Table 3.12 Beta regression results for legal-mark status from the released-to-retainted ratio during the 2018 summer Chinook MSF in Marine Area 7	25
Table 3.13 Fishery-total estimates of retained and released salmon (other than Chinook) during the 2018 summer Chinook MSF in Marine Area 7. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status	26
Table 3.14 Summary of CWTs recovered from Chinook salmon harvested during the 2018 summer Chinook MSF in Marine Area 7. The field “Number DITs” indicates the number of tags that belonged to double-index tag groups.	26
Table 3.15 Summary of double-index tagged (DIT) Chinook kept by anglers, and estimated total mortality of unmarked DIT Chinook due to hook-and-release impacts resulting from the 2018 summer Chinook MSF in Marine Area 7. AD = marked (adipose-clipped), UM = unmarked	27
Table 3.16 Season-total estimates of Chinook encounters by size/mark-status and total estimates of angler effort, summarized for all seasons to date of the Area 7 Summer Chinook MSF. Values may not add exactly due to rounding error. LM = legal-sized marked, LU = legal-sized unmarked, SM = sublegal-sized marked, SU = sublegal-sized unmarked.	27
Table 4.1 Sampling/estimation details on target parameters associated with the overall Area 9 summer mark-selective fishery monitoring program.....	29
Table 4.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 summer Chinook MSF in Marine Area 9. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	30
Table 4.3 Summary of total length samples from retained Chinook salmon collected during dockside angler interviews in the 2018 summer Chinook MSF in Marine Area 9.....	30
Table 4.4 Summary of coded-wire tags recovered from Chinook salmon harvested during the 2018 summer Chinook MSF in Marine Area 9. The field “Number DITs” corresponds to the number of recovered CWTs that belonged to double-index tag groups.	30
Table 4.5 Comparison of modeled and estimated total Chinook encounters for the 2018 summer Chinook MSF in Marine Area 9. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped) and UM = unmarked.....	32
Table 4.6 Summary of season-wide fishery impact estimates for the 2018 summer Chinook MSF in Marine Area 9. Release mortality rate = 0.15 for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	32
Table 4.7 Comparison of modeled and estimated total Chinook mortalities for the 2018 summer Chinook MSF in Marine Area 9. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped) and UM = unmarked.....	32
Table 4.8 Total Chinook encountered (retained and released) by private-boat anglers logging their trips on voluntary trip reports (VTRs), with estimates of legal-size and overall (legal and	

sublegal) mark rates during the 2017 summer Chinook MSF in Marine Area 9. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.....	34
Table 4.9 Composition of test fishery Chinook salmon encounters and associated mark-rate and size/mark-status proportion estimates for the summer 2018 Chinook salmon MSF in Marine Area 9. AD = marked (adipose-clipped), UM = unmarked.	34
Table 4.10 Summary of double-index tagged (DIT) Chinook salmon kept by anglers and estimated total mortality of unmarked DIT Chinook salmon due to hook-and-release impacts resulting from the 2018 summer Chinook MSF in Marine Area 9. AD = marked (adipose-clipped), UM = unmarked.....	34
Table 4.11 Monthly sample rates (Total retained Chinook sampled ¹ / Estimated retained Chinook) in the 2018 summer Chinook MSF in Marine Area 9.	35
Table 4.12 Fishery-total estimates of retained and released salmon (<i>other than Chinook</i>) in the 2018 summer Chinook MSF in Marine Area 9. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status	35
Table 4.13 Summary of the total number of anglers intercepted during on-the-water surveys conducted for the 2018 summer Chinook MSF in Marine Area 9. Sites in bold represent those included in the dockside sample frame.....	36
Table 4.14 Season-total estimates of Chinook salmon encounters by size/mark-status and total estimates of angler effort, summarized for all seasons to date of the Area 9 summer Chinook MSF. Values may not add exactly due to rounding error.....	37
Table 5.1 Sampling/estimation details on target parameters associated with the overall Area 10 summer mark-selective fishery monitoring program.....	39
Table 5.2 Method 2 estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 summer Chinook MSF in Marine Area 10. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	40
Table 5.3 Number of total length samples collected from retained Chinook salmon collected during dockside angler interviews in the 2018 summer Chinook MSF in Marine Area 10.	40
Table 5.4 Summary of coded-wire tags recovered from Chinook salmon harvested during the 2018 summer Chinook MSF in Marine Area 10. The field “Number DITs” corresponds to the number of recovered CWTs that belonged to double-index tag	41
Table 5.5 Comparison of modeled and estimated total Chinook salmon encounters for the 2018 summer Chinook MSF in Marine Area 10. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped) and UM = unmarked.	43
Table 5.6 Summary of season-wide fishery impact estimates for the 2018 summer Chinook MSF in Marine Area 10. Release mortality rate = 0.15 for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	43
Table 5.7 Comparison of modeled and estimated total Chinook salmon mortalities for the 2018 summer Chinook MSF in Marine Area 10. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped) and UM = unmarked.	43
Table 5.8 Monthly sample rates (Total retained Chinook salmon sampled ¹ /Estimated retained Chinook salmon) in the 2018 summer Chinook MSF in Marine Area 10.....	43
Table 5.9 Composition of test fishery Chinook salmon encounters and associated mark-rate and size/mark-status proportion estimates for the 2018 summer Chinook MSF in Marine Area 10.	

AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.....	45
Table 5.10 Total Chinook salmon encountered (retained and released) by private-boat anglers logging their trips on voluntary trip reports (VTRs), with estimates of legal-size and overall (legal and sublegal) mark rates during the 2018 summer Chinook MSF in Marine Area 10. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.....	45
Table 5.11 Fishery-total estimates of retained and released salmon (<i>other than Chinook salmon</i>) in the 2018 summer Chinook MSF in Marine Area 10. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status	46
Table 5.12 Summary of the total number of anglers intercepted during on-the-water surveys conducted for the 2018 summer Chinook MSF in Marine Area 10. Sites in bold represent those included in the dockside sample frame.	47
Table 5.13 Summary of double-index tagged (DIT) Chinook salmon kept by anglers, and estimated total mortality of unmarked DIT Chinook salmon due to hook-and-release impacts resulting from the 2018 summer Chinook MSF in Marine Area 10. AD = marked (adipose-clipped), UM = unmarked.....	48
Table 5.14 Season-total estimates of Chinook salmon encounters by size/mark-status and total estimates of angler effort, summarized for all seasons to date of the Area 10 summer Chinook MSF. Values may not add exactly due to rounding error.....	48
Table 6.1 Sampling/estimation details on target parameters associated with the overall Area 11 summer mark-selective fishery monitoring program.....	50
Table 6.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 summer Chinook MSF in Marine Area 11. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	51
Table 6.3 Number of total length samples collected from retained Chinook salmon collected during dockside angler interviews in the 2018 summer Chinook MSF in Marine Area 11.	51
Table 6.4 Comparison of modeled and estimated total Chinook salmon encounters for the 2018 summer Chinook MSF in Marine Area 11. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	53
Table 6.5 Summary of season-wide fishery impact estimates for the 2018 summer Chinook MSF in Marine Area 11. Release mortality rate = 0.15 for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	53
Table 6.6 Comparison of modeled and estimated total Chinook salmon mortalities for the 2018 summer Chinook MSF in Marine Area 11. Values may not add up perfectly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	53
Table 6.7 Summary of coded-wire tags recovered from Chinook salmon harvested during the 2018 summer Chinook MSF in Marine Area 11. The field “Number DITs” corresponds to the number of recovered CWTs that belonged to double-index tag	55
Table 6.8 Summary of double-index tagged (DIT) Chinook salmon kept by anglers, and estimated total mortality of unmarked DIT Chinook salmon due to hook-and-release impacts resulting from the 2018 summer Chinook MSF in Marine Area 11. AD = marked (adipose-clipped), UM = unmarked.....	55

Table 6.9 Monthly sample rates (Total retained Chinook salmon sampled ¹ / Estimated retained Chinook salmon) in the 2018 summer Chinook MSF in Marine Area 11. AD = marked (adipose-clipped), UM = unmarked.....	55
Table 6.10 Summary of the total number of anglers intercepted during on-the-water surveys conducted for the 2018 summer Chinook MSF in Marine Area 11. Sites in bold represent those included in the dockside sample frame.	56
Table 6.11 Fishery-total estimates of retained and released salmon (other than Chinook salmon) for the 2018 summer Chinook MSF in Marine Area 11. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status. Values may not add exactly due to rounding error.	57
Table 6.12 Total Chinook salmon encountered (retained and released) by private-boat anglers logging their trips on voluntary trip reports (VTRs) during the 2018 summer Chinook MSF in Marine Area 11, with estimates of legal-size and overall (legal and sublegal) mark rates. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.....	57
Table 6.13 Season-total estimates of Chinook salmon encounters by size/mark-status and total estimates of angler effort, summarized for all seasons to date of the Area 11 summer Chinook MSF. Values may not add exactly due to rounding error.	58
Table 7.1 Sampling/estimation details on target parameters associated with the overall Area 12 summer mark-selective fishery monitoring program.....	60
Table 7.2 Observations of fishing effort, Chinook salmon retained, and reported Chinook salmon releases, by week, for the summer 2018 Chinook salmon MSF in Marine Area 12 Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status, UD = undetermined mark-status.....	61
Table 7.3 Observations of fishing effort, salmon retained (other than Chinook), and reported salmon releases (other than Chinook), by week, for the summer 2018 Chinook salmon MSF in Marine Area 12. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status, UD = undetermined mark-status.	61
Table 7.4 Number of total length samples collected from retained Chinook salmon collected during dockside angler interviews in the 2018 summer Chinook MSF in Marine Area 12.	63
Table 7.5 List of sites sampled with the number of sampling events (site-days) during the 2018 summer Chinook MSF in Marine Area 12.	63
Table 7.6 Total Chinook salmon encountered (retained and released) by private-boat anglers logging their trips on voluntary trip reports (VTRs) during the 2018 summer Chinook MSF in Marine Area 12, with estimates of legal-size and overall (legal and sublegal) mark rates. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.....	63
Table 7.7 Summary of coded-wire tags recovered from Chinook salmon harvested during the 2018 summer Chinook MSF in Marine Area 12. The field “Number DITs” corresponds to the number of recovered CWTs that belonged to double-index tag	64
Table 8.1 Sampling/estimation details on target parameters associated with the overall Area 13 mark-selective fishery monitoring program.....	66
Table 8.2 Observations of fishing effort, salmon harvest, and reported salmon releases, by week, for the 2018 summer Chinook MSF in Marine Area 13. Note: displayed values are sample	

observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark status.....	67
Table 8.3 Observations of fishing effort, salmon retained (other than Chinook), and reported salmon releases (other than Chinook), by week, for the summer 2018 Chinook salmon MSF in Marine Area 13. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status, UD = undetermined mark-status.	68
Table 8.4 Total Chinook salmon encountered (retained and released) by private-boat anglers logging their trips on voluntary trip reports (VTRs) during the 2018 summer Chinook MSF in Marine Area 13, with estimates of legal-size and overall (legal and sublegal) mark rates. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.....	70
Table 8.5 Summary of coded-wire tags recovered from Chinook salmon harvested during the 2018 summer Chinook MSF in Marine Area 13. The field “Number DITs” corresponds to the number of recovered CWTs that belonged to double-index tag	70
Table 8.6 List of sites sampled with the number of sampling events (site-days) during the 2018 summer Chinook MSF in Marine Area 13.	71
Table 9.1 Sampling/estimation details on target parameters associated with the overall on-the-water survey and aerial survey comparison	73
Table 9.2 Method 2 estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 summer Chinook MSF in Marine Area 7 using in-sample proportions from boat surveys. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.....	74
Table 9.3 Summary of boats encountered by day from aerial surveys, boat effort surveys, and dockside surveys during the 2018 summer Chinook MSF in Marine Area 7. Note: On all three sampling days, both aerial survey boat effort and dockside creel boat effort were more than effort surveyed by boat.	74
Table 9.4 Summary boat survey effort used to estimate the fraction of effort captured in the three-site sample frame during the 2018 summer Chinook salmon MSF in Marine Area 7....	74
Table 9.5 Summary of the total number of anglers intercepted during on-the-water surveys conducted for the 2018 summer Chinook MSF in Marine Area 7. Sites in bold represent those included in the dockside sample frame.	75

LIST OF FIGURES

Figure 1.1 Temporal patterns in fishing effort during the 2018 summer Chinook MSF in Marine Area 5	5
Figure 1.2 Temporal patterns in Chinook encounters (retained and released) during the 2018 summer Chinook MSF in Marine Area 5	5
Figure 1.3 Length-frequency distribution of retained marked Chinook sampled in dockside angler interviews during the 2018 summer Chinook MSF in Marine Area 5. Note: displayed values are observations where lengths taken.....	5
Figure 1.4 Temporal patterns in CPUE (landed Chinook per angler trip) during the 2018 summer Chinook MSF in Marine Area 5.....	5
Figure 1.5 Comparison of modeled and estimated total Chinook encounters and mortalities for the 2018 summer Chinook MSF in Marine Area 5. Error bars represent approximate 95% confidence intervals for field estimates.....	7
Figure 2.1 Temporal patterns in fishing effort during the 2018 summer Chinook MSF in Marine Area 6. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates	14
Figure 2.2 Temporal patterns in Chinook encounters (retained and released) during the 2018 summer Chinook MSF in Marine Area 6. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates	14
Figure 2.3 Length-frequency distribution of retained marked Chinook sampled in dockside angler interviews during the 2018 summer Chinook MSF in Marine Area 5. Note: displayed values are observations where lengths taken.....	14
Figure 2.4 Temporal patterns in CPUE (landed Chinook per angler trip) during the 2018 summer Chinook MSF in Marine Area 6. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates	14
Figure 3.1 Temporal patterns in fishing effort during the 2018 summer Chinook MSF in Marine Area 7	20
Figure 3.2 Temporal patterns in CPUE (number of Chinook salmon landed per angler trip) during the 2018 summer Chinook MSF in Marine Area 7.....	20
Figure 3.3 Length-frequency distribution of retained marked Chinook salmon sampled in dockside angler interviews during the 2018 summer Chinook MSF in Marine Area.....	20
Figure 3.4 Temporal patterns in Chinook salmon encounters (number retained and released) during the 2018 summer Chinook MSF in Marine Area 7.....	20
Figure 3.5 Comparison of modeled and estimated total Chinook encounters and mortalities for the 2018 summer Chinook MSF in Marine Area 7. Error bars represent approximate 95% confidence intervals for field estimates	22
Figure 3.6 Length-frequency distributions of marked (left panel) and unmarked (right panel) Chinook encountered by test fishers during the 2018 summer Chinook MSF in Marine Area 7. The vertical dashed line in the left panel corresponds to the legal size limit (22 in or 56 cm).24	24
Figure 3.7 Beta regression results displaying the relationship between the released-to-retained ratio from dockside sampling data and the proportion of legal Chinook from the test fishery or VTR data, including parameters resulting from the beta regression model. The dotted lines represent 95% confidence bounds.....	25
Figure 4.1 Temporal patterns in fishing effort during the 2018 summer Chinook MSF in Marine Area 9	31

Figure 4.2 Temporal patterns in CPUE (landed Chinook per angler trip) during the 2018 summer Chinook MSF in Marine Area 9.....	31

INTRODUCTION

In the marine environments of the Strait of Juan de Fuca and Puget Sound, abundant runs of hatchery Chinook salmon (*Oncorhynchus tshawytscha*) have been mixed with depressed runs of natural-origin Chinook salmon. Providing recreational anglers with opportunities to harvest abundant hatchery stocks while simultaneously protecting weaker, natural-origin stocks has proven to be a significant conservation and management challenge. The combination of large-scale hatchery marking (i.e., fin clipping) programs and mark-selective harvest regulations makes it possible for anglers to pursue and harvest hatchery Chinook salmon while minimally impacting natural-origin salmon populations. In such “mark-selective fisheries” (MSFs), anglers are generally allowed to retain adipose-fin clipped (“marked”) hatchery fish and are required to release unharmed any unclipped (“unmarked”, predominantly natural-origin) salmon encountered¹.

Since the Washington Department of Fish and Wildlife (WDFW) implemented the first marine mark-selective Chinook salmon fisheries in Marine Areas 5 and 6 (Strait of Juan de Fuca) in 2003 based on state-tribal agreements (Thiesfeld and Hagen-Breaux 2005a, WDFW 2008a), mark-selective Chinook salmon fishing regulations have been implemented in multiple Puget Sound Marine Catch Areas during both the summer and winter seasons. Including the 2018 management season, mark-selective fisheries for Chinook salmon have been conducted in Puget Sound for the last 15 summer (May through September) seasons and the last 13 winter (October through April) seasons.

During the 2018 summer season, May through September, WDFW implemented eight mark-selective Chinook salmon fisheries in Areas 5, 6, 7, 9, 10, 11, 12 and 13. The Chinook MSF seasons in each area were scheduled as follows:

- Areas 5 from July 1 through August 15, 2018;
- Areas 6 from July 3 through August 15, 2018;
- Area 7 from July 1 through July 31, 2018;
- Area 9 from July 16 through August 15, 2018;
- Area 10 from July 16 through August 30, 2018;
- Area 11 from June 1 through September 30, 2018;
- Area 12 from July 1 through September 30, 2018; and
- Area 13 from May 1 through September 30, 2018.

¹The regulations specific to summer mark-selective fisheries in Puget Sound Marine Catch Areas allowed for the retention of up to two legal-sized (≥ 22 inches [56 cm]) marked Chinook salmon per day and required the immediate release of all unmarked or sublegal Chinook salmon. Additionally, anglers were: *i*) required to use single-point, barbless hooks while fishing for salmon, *ii*) held to a combined (all salmon species) two-fish daily limit, and *iii*) held to a handling rule that prevented them from bringing unmarked and/or sublegal Chinook aboard their vessels.

RESULTS

1) Marine Area 5 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a sixteenth consecutive summer Chinook MSF in Marine Area 5 from July 1 through August 15, 2018. WDFW's Puget Sound Sampling Unit (PSSU) implemented an intensive monitoring program in Area 5 throughout the season to collect the data needed to estimate key parameters characterizing the fishery and its impacts on unmarked salmon. Sampling activities included dockside creel sampling and intensive efforts to distribute and collect voluntary trip reports (VTRs) from the angling public. During the summer 2018 mark-selective Chinook salmon fishery in Area 5 we maintained our enhanced VTR program to improve the return rate of VTRs, which provide estimates of Chinook salmon encounter rates by size class (legal or sublegal) and mark status (marked (adipose fin-clipped) or unmarked). **Table 1.1** summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 5 summer Chinook MSF.

Table 1.1 Sampling/estimation details on target parameters associated with the overall Area 5 summer mark-selective fishery monitoring program.

Activity	Focal Parameter(s)	Secondary Parameter(s)	Sample Unit(s)	Finest Estimation Time Step	Comments
Dockside Creel Sampling	Fishing effort (boat & angler trips); kept and released fish ¹	Catch rates (CPUE); length, age, and CWT composition of harvest ¹ ; collection of angler fishing methods.	Angler trip; kept fish; reported fish release	Two weeks	Creel estimates were produced for two-week estimation periods and stratified into “weekday” (Mon.-Thurs.) and “weekend” (Fri.-Sun.) day-type strata within weeks. For the weekday stratum we sampled $n=2$ days out of $N=8$ available weekdays per two-week period. For the weekend stratum we sampled $n=2$ days out of $N=3$ available weekend days per week.
On-the-water Surveys	Proportion of total angler effort that uses sample-frame sites (i.e., site “size measures”) versus out-of-frame sites.	Total on-water boat and angler counts at assumed peak effort time interval (instantaneous count); spatial distribution of recreational fishing boats in the area.	Boats and anglers	Month	2 weekend boat surveys and 2 weekday surveys were conducted during the 2018 Area 5 summer Chinook MSF. As in-season observations suggested that sites and effort patterns did not change substantially in 2018 compared to past years, we incorporated data from these surveys into recent average site weights to compute catch and effort estimates.
Voluntary Trip Reports (VTRs)	Size (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook salmon	Encounter data for non-Chinook salmon species (e.g., Coho salmon) that the angler may record on the VTR form	Fish encounter	Season	We used VTR data to estimate the size/mark-status proportions (LM = 20%, LU = 12%, SM = 47%, SU = 12%; Table 1.4) needed to produce encounter and mortality estimates.
Overall Fishery Impacts Estimation	Total Chinook salmon encounters and mortalities by size/mark-status group	Ratios of encounters and mortalities per kept Chinook salmon	N/A	Season	Estimated on a monthly time step but considered at the season-total level.
Coded-wire tag (CWT) Impacts Estimation	Marked/unmarked double-index tag (DIT) encounters and mortalities	N/A	N/A	Season	The temporal resolution of DIT impacts is constrained by the total number of tags recovered.

¹ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.

2) Marine Area 6 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a sixteenth consecutive summer Chinook MSF in Marine Area 6 from July 3 through August 15, 2018. WDFW's Puget Sound Sampling Unit (PSSU) implemented a "Baseline Sampling" program (see WDFW 2012a for details) consisting of dockside angler interviews with catch sampling along with intensive efforts to distribute and collect voluntary trip reports (VTRs) from the angling public. We maintained our enhanced VTR program to improve the return rate of voluntary trip reports, which provide estimates of Chinook salmon encounter rates by size class (legal or sublegal) and mark status (marked or unmarked).

Unlike the other survey designs, Baseline Sampling does not provide a means for generating in-season or immediate post-season estimates of fishery total catch and effort. These estimates will be available approximately one year after the close of the fishery through the WDFW Catch Record Card (CRC) program. Once available, CRC-based catch estimates will be used to generate estimates of total Chinook salmon encounters and mortalities by size and mark-status using the methods provided in WDFW & NWIFC (2013). Thus, while these descriptors of MSF impacts are not presented in the present document, they will be available at a future time.

Table 2.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 6 summer Chinook MSF, including relative catch and effort patterns over the season based on the assumption that baseline-sampling observations of these parameters are good indicators of associated fishery-wide trends.

Table 2.1 Sampling/estimation details on target parameters associated with the overall Area 6 summer mark-selective fishery monitoring program.

Activity	Focal Parameter(s)	Secondary Parameter(s)	Sample Unit(s)	Finest Estimation Time Step	Comments
Dockside Angler Interviews (Baseline Sampling)	Observed (in-sample) fishing effort (boat & angler trips); kept and released fish.	Catch rates (CPUE); length, age, and CWT composition of harvest ¹ ; collection of angler fishing methods.	Angler trip; kept fish; reported fish release	Week	Observed catch per angler trip and species composition data obtained from baseline sampling will ultimately be combined with Catch Record Card (CRC) data to produce fishery-total estimates at a later time (approximately one year following the fishery).
Voluntary Trip Reports (VTRs)	Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook	Encounter data for non-Chinook species (e.g., coho) that the angler may record on the VTR form	Fish encounter	Season	When CRC-based retained Chinook salmon estimates become available VTR data will be used in the estimation of total Chinook salmon encounters by size/mark group (LM = 48%, LU = 21%, SM = 21%, SU = 8%; Table 2.5), along with associated impacts, using the methods described in WDFW & NWIFC (2013).
Overall Fishery Impacts Estimation	Total Chinook salmon encounters and mortalities, by size/mark-status group	Ratios of encounters and mortalities per kept Chinook	N/A	Season	Will be estimated at a later date using the CRC-based retained Chinook salmon estimate, when it becomes available.
Coded-wire tag (CWT) Impacts Estimation	Marked/unmarked double-index tag (DIT) encounters and mortalities	N/A	N/A	Season	Will be estimated at a later date using the CRC-based retained Chinook salmon estimate, when it becomes available. The temporal resolution of DIT impacts is constrained by the total number of tags recovered.

Table 2.2 Observations of fishing effort, Chinook salmon retained, and reported Chinook salmon releases, by week, for the summer Chinook salmon MSF in Marine Area 6. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status, UD = undetermined mark-status.

3) Marine Area 7 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a third consecutive summer Chinook MSF in Marine Area 7 from July 1 through July 30, 2018. WDFW's Puget Sound Sampling Unit (PSSU) implemented an intensive monitoring program in Area 7 throughout the season in order to collect the data needed to estimate key parameters characterizing the fishery and its impacts on unmarked salmon. Sampling activities included intensive dockside creel sampling, on-the-water effort surveys, test fishing and collection of voluntary trip reports (VTRs) from the angling public. **Table 3.1** summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 7 summer Chinook MSF.

Table 3.1 Sampling/estimation details on target parameters associated with the overall Area 7 Chinook MSF monitoring program.

Activity	Focal Parameter(s)	Secondary Parameter(s)	Sample Unit(s)	Finest Estimation Time Step	Comments
Dockside Creel Sampling	Fishing effort (boat & angler trips); kept and released fish	Catch rates (CPUE); length, age, and CWT composition of harvest ¹ ; collection of angler fishing methods.	Angler trip; kept fish; reported fish release	Two weeks	Creel estimates were produced for two-week estimation periods and stratified into “weekday” (Mon.-Thurs.) and “weekend” (Fri.-Sun.) day-type strata within weeks. For the weekday stratum we sampled $n=2$ days out of $N=8$ available weekdays per two-week period. For the weekend stratum we sampled $n=2$ days out of $N=3$ available weekend days per week.
Aerial Surveys	Fraction of Area 7 effort (boats) captured in the four-site sample frame via creel surveys (Sample Fraction, f_{ij}).	Total boat counts at assumed peak effort time interval (instantaneous count); spatial distribution of fishing boats in the area.	Boats	Season	The sample fraction was calculated for individual aerial survey dates (see Table 3.7 $n=5$ surveys conducted out of $N=31$ days available in the season). Season-wide sample fraction was calculated as the average sample fraction over the 5 individual aerial surveys.
Test Fishing	Size (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook	Chinook length, age, and DNA-based ² stock composition; species composition of non-Chinook encounters	Fish encounter	Season	Due to a short season, and low test fishing and VTR encounters (LM = 30%, LU = 19%, SM = 22%, SU = 30% n=27 test fishing encounters; Table 3.9); a CRC for Encounter ¹ approach was used to estimate encounters (LM=53%, LU=21%, SM=18%, SU=7%, Table 3.12).
Voluntary Trip Reports (VTRs)	Size (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook	Encounter data for non-Chinook species (e.g., Coho) that the angler may record on the VTR form	Fish encounter	Season	VTR data proportions (LM=78%, LU=22%, SM=0%, LU=0%, n=36 VTR encounters; Table 3.10), were not used to estimate encounters.
Overall Fishery Impacts Estimation	Total Chinook encounters and mortalities, by size/mark-status group	Ratios of encounters and mortalities per kept Chinook	N/A	Season	Estimated on a monthly time step but considered at the season-total level.
Coded-wire tag (CWT) Impacts Estimation	Marked/unmarked double-index tag (DIT) encounters and mortalities	N/A	N/A	Season	The temporal resolution of DIT impacts is constrained by the total number of tags recovered.

4) Marine Area 9 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a twelfth consecutive summer Chinook MSF in Marine Area 9 from July 16 through August 15, 2018. Due to in-season action, the fishery was closed on July, 29 2018 when the quota was reached. WDFW's Puget Sound Sampling Unit (PSSU) implemented an intensive monitoring program in Area 9 throughout the season to collect the data needed to estimate key parameters characterizing the fishery and its impacts on unmarked salmon. Sampling activities included intensive dockside creel sampling, on-the-water effort surveys, test fishing and collection of voluntary trip reports (VTRs) from the angling public. **Table 4.1** summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 9 summer Chinook MSF.

Table 4.1 Sampling/estimation details on target parameters associated with the overall Area 9 summer mark-selective fishery monitoring program.

Activity	Focal Parameter(s)	Secondary Parameter(s)	Sample Unit(s)	Finest Estimation Time Step	Comments
Dockside Creel Sampling	Fishing effort (boat & angler trips); kept and released fish	Catch rates (CPUE); length, age, and CWT composition of harvest ¹ ; collection of angler fishing methods.	Angler trip; kept fish; reported fish release	One week	Within weeks, estimates were produced by day-type strata (weekday/weekend). Each week we sampled every Friday, Saturday and Sunday, and we randomly selected $n=2$ out of $N=4$ weekdays (Monday-Thursday) for sampling.
On-the-water Surveys	Proportion of total angler effort that uses sample-frame sites (i.e., site “size measures”) versus out-of-frame sites.	Total on-water boat and angler counts at assumed peak effort time interval (instantaneous count); spatial distribution of recreational fishing boats in the area.	Boats and anglers	Month	A total of 4 boat surveys (2 weekday and 2 weekend) were conducted during the two week fishery.
Test Fishing	Size (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook	Chinook salmon length, age, and DNA-based ² stock composition; species composition of non-Chinook salmon encounters	Fish encounter	Season	Given sufficient sample size ($n=78$) of fish caught in the test fishery, we used the test fishery data only to estimate the size/mark-status proportions (LM = 56%, LU = 9%, SM = 31%, SU = 4%; Table 4.9) needed to produce encounter and mortality estimates.
Voluntary Trip Reports (VTRs)	Size (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook	Encounter data for non-Chinook salmon species (e.g., coho) that the angler may record on the VTR form	Fish encounter	Season	The size/mark-status proportions of VTR data (LM = 51%, LU = 19%, SM = 30%, SU = 0%; Table 4.8) were not significantly different than those of the test fishery data. However, VTR data were not used in impact estimation due to the assumed higher data quality and sufficient sample sizes of the test fishery data.
Overall Fishery Impacts Estimation	Total Chinook encounters and mortalities, by size/mark-status group	Ratios of encounters and mortalities per kept Chinook	N/A	Season	Estimated on a monthly time step but considered at the season-total level.
Coded-wire tag (CWT) Impacts Estimation	Marked/unmarked double-index tag (DIT) encounters and mortalities	N/A	N/A	Season	The temporal resolution of DIT impacts is constrained by the total number of tags recovered.

¹ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.² Though samples were collected, DNA-based estimates of stock composition are not yet available for this fishery.

Table 4.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 summer Chinook MSF in Marine Area 9. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.

5) Marine Area 10 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented an eleventh summer Chinook MSF in Marine Area 10 from July 16 through August 30, 2018. Due to in-season action, the fishery was closed on August 16, 2018 when the quota was reached. WDFW's Puget Sound Sampling Unit (PSSU) implemented an intensive monitoring program in Area 10 throughout the season in order to collect the data needed to estimate key parameters characterizing the fishery and its impacts on unmarked salmon. Sampling activities included intensive dockside creel sampling, on-the-water effort surveys, test fishing and collection of voluntary trip reports (VTRs) from the angling public. **Table 5.1** summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 10 summer Chinook MSF.

Table 5.1 Sampling/estimation details on target parameters associated with the overall Area 10 summer mark-selective fishery monitoring program.

Activity	Focal Parameter(s)	Secondary Parameter(s)	Sample Unit(s)	Finest Estimation Time Step	Comments
Dockside Creel Sampling	Fishing effort (boat & angler trips); kept and released fish	Catch rates (CPUE); length, age, and CWT composition of harvest ¹ ; collection of angler fishing methods.	Angler trip; kept fish; reported fish release.	One week	Within weeks, estimates were produced by day-type strata (weekday/weekend). Each week we sampled every Friday, Saturday and Sunday, and we randomly selected $n=2$ out of $N=4$ weekdays (Monday–Thursday) for sampling.
On-the-water Surveys	Proportion of total angler effort that uses sample-frame sites (i.e., site “size measures”) versus out-of-frame sites.	Total on-water boat and angler counts at assumed peak effort time interval (instantaneous count); spatial distribution of recreational fishing boats in the area.	Boats and anglers	Month	A total of 8 boat surveys (5 weekday and 3 weekend) were conducted during the month long fishery.
Test Fishing	Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook salmon	Chinook salmon length, age, and DNA-based ² stock composition; species composition of non-Chinook salmon encounters	Fish encounter	Season	A sufficient number of fish caught in the test fishery ($n=144$; LM=47%, LU=9%, SM=34%, SU=10 %; Table 5.9) due to assumed higher accuracy only test fishing data was used to estimate encounters.
Voluntary Trip Reports (VTRs)	Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook salmon	Encounter data for non-Chinook salmon species (e.g., Coho salmon) that the angler may record on the VTR form	Fish encounter	Season	The size/mark-status proportions of VTR data (LM = 29%, LU = 13%, SM = 37%, SU = 21%; Table 5.10) were similar to those of the test fishery data, but with the sufficient size of the test fishing data set and the assumption that test fishing data was more accurate only test fishing data was used.
Overall Fishery Impacts Estimation	Total Chinook salmon encounters and mortalities by size/mark-status group	Ratios of encounters and mortalities per kept Chinook salmon	N/A	Season	Estimated on a monthly time step but considered at the season-total level.
Coded-wire tag (CWT) Impacts Estimation	Marked/unmarked double-index tag (DIT) encounters and mortalities	N/A	N/A	Season	The temporal resolution of DIT impacts is constrained by the total number of tags recovered.

¹ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.² Though samples were collected, DNA-based estimates of stock composition are not yet available for this fishery.

Table 5.2 Method 2 estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 summer Chinook MSF in Marine Area 10. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.

Season Total			4,850	35	4,886	1778	13	1791	36.70%

¹/ Number of retained Chinook salmon sampled includes all retained Chinook salmon inspected for CWT's, from all sites sampled during the summer 2018 Area 10 Chinook MSF (creel estimates and the fish sampled as part of baseline sampling).

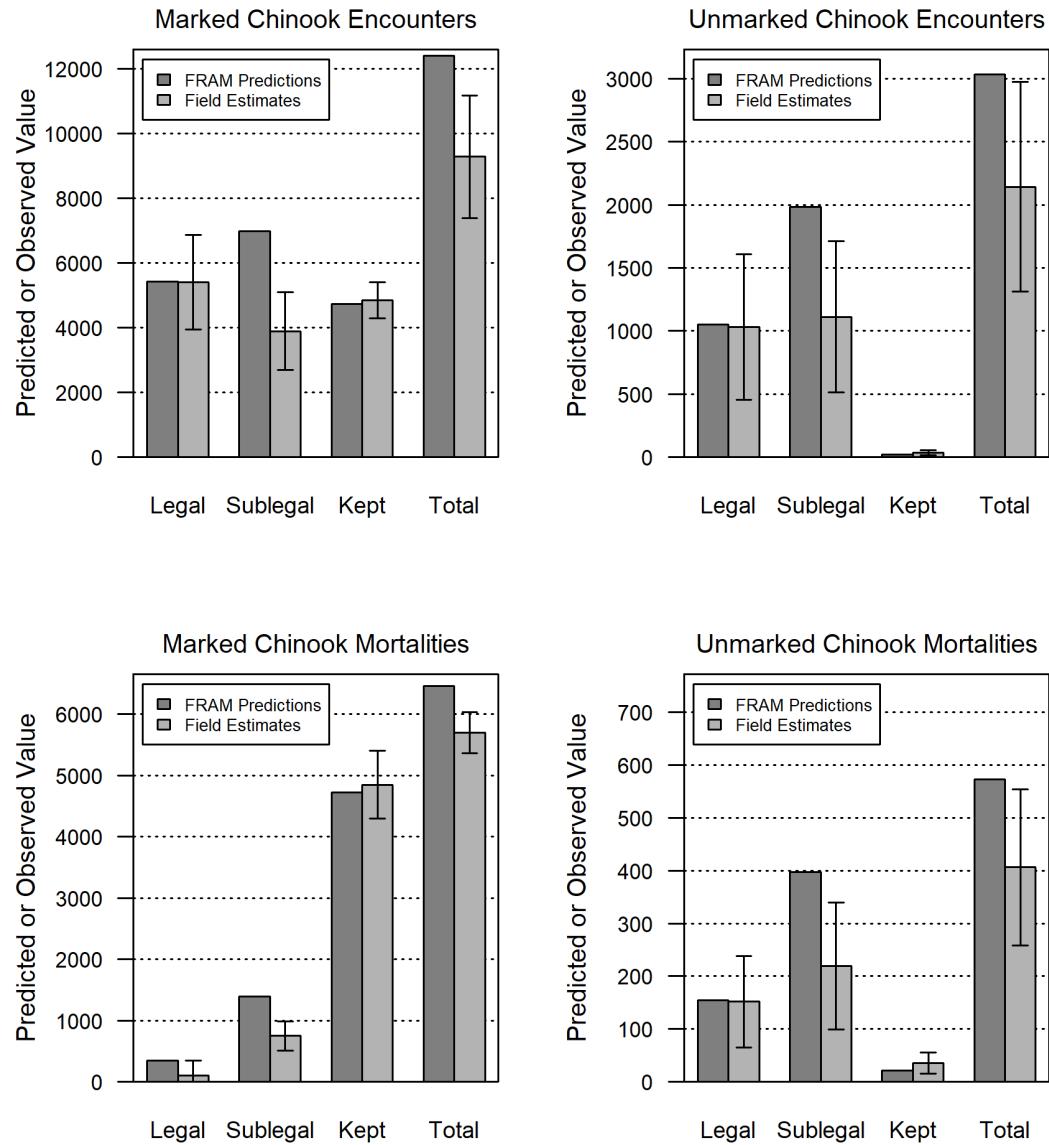

Figure 5.5 Comparison of modeled and estimated total Chinook salmon encounters and mortalities for the 2018 summer Chinook MSF in Marine Area 10. Error bars represent approximate 95% confidence intervals for field estimates.

Table 5.9 Composition of test fishery Chinook salmon encounters and associated mark-rate and size/mark-status proportion estimates for the 2018 summer Chinook MSF in Marine Area 10. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.

Stat Week	Fishing Effort		Legal		Sublegal		Total
	Days	Hrs Fished	AD	UM	AD	UM	
29	5	21.30	11	2	16	4	33
30	6	22.22	4	1	9	3	17
31	7	52.88	24	3	9	3	39
32	7	49.39	15	3	10	2	30
33	4	37.58	14	4	5	2	25
Total	29	183.37	68	13	49	14	144
Size/mark-status composition:			0.47	0.09	0.34	0.10	
Legal size mark rate:			0.84				
Overall mark rate:			0.81				

Size and mark-status proportions were not significantly different between private boat VTR and test fishery data ($df=3$, $p\text{-value}=0.11$). However, based on sufficient sample size and assumed higher data quality, we used only test fishery data to estimate the size/mark-status proportions needed to produce Chinook salmon encounter and mortality estimates for the Area 10 summer Chinook MSF.

Table 5.10 Total Chinook salmon encountered (retained and released) by private-boat anglers logging their trips on voluntary trip reports (VTRs), with estimates of legal-size and overall (legal and sublegal) mark rates during the 2018 summer Chinook MSF in Marine Area 10. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.

6) Marine Area 11 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented its twelfth consecutive summer Chinook MSF in Marine Area 11 from June 1 through September 30, 2018. Due to in-season action, the fishery was closed on August, 25 2018 when the quota was reached.

WDFW's Puget Sound Sampling Unit (PSSU) implemented an intensive monitoring program in Area 11 throughout the season in order to collect the data needed to estimate key parameters characterizing the fishery and its impacts on unmarked salmon. Sampling activities included dockside creel sampling and collection of voluntary trip reports (VTRs) from the angling public. **Table 6.1** summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section, we present results from our monitoring activities during the Area 11 summer Chinook MSF.

Table 6.1 Sampling/estimation details on target parameters associated with the overall Area 11 summer mark-selective fishery monitoring program.

Activity	Focal Parameter(s)	Secondary Parameter(s)	Sample Unit(s)	Finest Estimation Time Step	Comments
Dockside Creel Sampling	Fishing effort (boat & angler trips); kept and released fish	Catch rates (CPUE); length, age, and CWT composition of harvest ¹ ; collection of angler fishing methods.	Angler trip; kept fish; reported fish release	Two weeks	Creel estimates were produced for two-week estimation periods and stratified into “weekday” (Mon.-Thurs.) and “weekend” (Fri.-Sun.) day-type strata within weeks. For the weekday stratum, we sampled $n=2$ days out of $N=8$ available weekdays per two-week period. For the weekend stratum, we sampled $n=2$ days out of $N=3$ available weekend days per week.
On-the-water Surveys	Proportion of total angler effort that uses sample-frame sites (i.e., site “size measures”) versus out-of-frame sites.	Total on-water boat and angler counts at assumed peak effort time interval (instantaneous count); spatial distribution of recreational fishing boats in the area.	Boats and anglers	Month	A total of 3 weekday and 5 weekend boat surveys were conducted during the three month fishery.
Voluntary Trip Reports (VTRs)	Size (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook salmon	Encounter data for non-Chinook salmon species (e.g., Coho salmon) that the angler may record on the VTR form	Fish encounter	Season	We used VTR data to estimate the size/mark-status proportions (LM = 33%, LU = 12%, SM = 42%, SU = 14%; Table 6.16) needed to produce encounter and mortality estimates.
Overall Fishery Impacts Estimation	Total Chinook salmon encounters and mortalities by size/mark-status group	Ratios of encounters and mortalities per kept Chinook salmon	N/A	Season	Estimated on a monthly time step but considered at the season-total level.
Coded-wire tag (CWT) Impacts Estimation	Marked/unmarked double-index tag (DIT) encounters and mortalities	N/A	N/A	Season	The temporal resolution of DIT impacts is constrained by the total number of tags recovered.

¹ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.

Table 6.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 summer Chinook MSF in Marine Area 11. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.

7) Marine Area 12 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a seventh consecutive summer Chinook MSF in Marine Area 12 from July 1 through September 30, 2018. WDFW's Puget Sound Sampling Unit (PSSU) implemented a "Baseline Sampling" program (see WDFW 2012a for details) consisting of dockside angler interviews with catch sampling along with efforts to distribute and collect voluntary trip reports (VTRs) from the angling public.

Unlike the other survey designs, Baseline Sampling does not provide a means for generating in-season or immediate post-season estimates of fishery total catch and effort. These estimates will be available approximately one year after the close of the fishery through the WDFW Catch Record Card (CRC) program. Once available, CRC-based catch estimates will be used to generate estimates of total Chinook salmon encounters and mortalities by size and mark-status using the methods provided in WDFW & NWIFC (2013). While these descriptors of MSF impacts are not presented in the present document, they will be available at a future time.

Table 7.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 12 summer Chinook MSF, including relative catch and effort patterns over the course of the season based on the assumption that baseline-sampling observations of these parameters are good indicators of associated fishery-wide trends.

Table 7.1 Sampling/estimation details on target parameters associated with the overall Area 12 summer mark-selective fishery monitoring program.

Activity	Focal Parameter(s)	Secondary Parameter(s)	Sample Unit(s)	Finest Estimation Time Step	Comments
Dockside Angler Interviews (Baseline Sampling)	Observed (in-sample) fishing effort (boat & angler trips); kept and released fish.	Catch rates (CPUE); length, age, and CWT composition of harvest ¹ ; collection of angler fishing methods.	Angler trip; kept fish; reported fish release	Week	Observed catch per angler trip and species composition data obtained from baseline sampling will ultimately be combined with Catch Record Card (CRC) data to produce fishery-total estimates at a later time (approximately one year following the fishery).
Voluntary Trip Reports (VTRs)	Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook	Encounter data for non-Chinook species (e.g., coho) that the angler may record on the VTR form	Fish encounter	Season	When CRC-based retained Chinook estimates become available VTR data will be used in the estimation of total Chinook encounters by size/mark group (LM = 43%, LU = 0%, SM = 43%, SU = 14%; Table 7.6), along with associated impacts, using the methods described in WDFW & NWIFC (2013).
Overall Fishery Impacts Estimation	Total Chinook encounters and mortalities, by size/mark-status group	Ratios of encounters and mortalities per kept Chinook	N/A	Season	Will be estimated at a later date using the CRC-based retained Chinook estimate, when it becomes available.
Coded-wire tag (CWT) Impacts Estimation	Marked/unmarked double-index tag (DIT) encounters and mortalities	N/A	N/A	Season	Will be estimated at a later date using the CRC-based retained Chinook estimate, when it becomes available. The temporal resolution of DIT impacts is constrained by the total number of tags recovered.

Table 7.2 Observations of fishing effort, Chinook salmon retained, and reported Chinook salmon releases, by week, for the summer 2018 Chinook salmon MSF in Marine Area 12. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark-status, UD = undetermined mark-status.

8) Marine Area 13 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a twelfth consecutive summer Chinook MSF in Marine Area 13 from May 1 through September 30, 2018. WDFW's Puget Sound Sampling Unit (PSSU) implemented a "Baseline Sampling" program (see WDFW 2012a for details) consisting of dockside angler interviews with catch sampling along with efforts to distribute and collect voluntary trip reports (VTRs) from the angling public.

Unlike the other survey designs, Baseline Sampling does not provide a means for generating in-season or immediate post-season estimates of fishery total catch and effort. These estimates will be available approximately one year after the close of the fishery through the WDFW Catch Record Card (CRC) program. Once available, CRC-based catch estimates will be used to generate estimates of total Chinook salmon encounters and mortalities by size and mark-status using the methods provided in WDFW & NWIFC (2013). While these descriptors of MSF impacts are not presented in the present document, they will be available at a future time.

Table 8.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 13 summer Chinook MSF, including relative catch and effort patterns over the course of the season based on the assumption that baseline-sampling observations of these parameters are good indicators of associated fishery-wide trends.

Table 8.1 Sampling/estimation details on target parameters associated with the overall Area 13 mark-selective fishery monitoring program.

Activity	Focal Parameter(s)	Secondary Parameter(s)	Sample Unit(s)	Finest Estimation Time Step	Comments
Dockside Angler Interviews (Baseline Sampling)	Observed (in-sample) fishing effort (boat & angler trips); kept and released fish.	Catch rates (CPUE); length, age, and CWT composition of harvest ¹ ; collection of angler fishing methods.	Angler trip; kept fish; reported fish release	Week	Observed catch per angler trip and species composition data obtained from baseline sampling will ultimately be combined with Catch Record Card (CRC) data to produce fishery-total estimates at a later time (approximately one year following the fishery).
Voluntary Trip Reports (VTRs)	Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook salmon	Encounter data for non-Chinook salmon species (e.g., Coho salmon) that the angler may record on the VTR form	Fish encounter	Season	When CRC-based retained Chinook salmon estimates become available VTR data may be used in the estimation of total Chinook salmon encounters by size/mark group (LM = 55%, LU = 3%, SM = 32%, SU = 10%; Table 8.4), along with associated impacts, using the methods described in WDFW & NWIFC (2013).
Overall Fishery Impacts Estimation	Total Chinook salmon encounters and mortalities by size/mark-status group	Ratios of encounters and mortalities per kept Chinook salmon	N/A	Season	Will be estimated at a later date using the CRC-based retained Chinook salmon estimate, when it becomes available.
Coded-wire tag (CWT) Impacts Estimation	Marked/unmarked double-index tag (DIT) encounters and mortalities	N/A	N/A	Season	Will be estimated at a later date using the CRC-based retained Chinook salmon estimate, when it becomes available. The temporal resolution of DIT impacts is constrained by the total number of tags recovered.

9) Marine Area 7 Summer On-The-Water Survey

The Washington Department of Fish and Wildlife (WDFW) conducted three on-the-water boat surveys simultaneously with aerial surveys on July 11, 2018, July 19, 2018, and July 20, 2018 in accordance with the List of Agreed to Fisheries (2018-2019). WDFW concurrently utilized three on-the-water survey boats to survey Marine Area 7 launching out of Port Townsend Boat Haven, Skyline Marina, and Washington Park Boat Ramp. On all three survey days more boats were surveyed from the air and sampled at in-sample dockside locations than counted in the on-the-water survey.

Table 9.1 Sampling/estimation details on target parameters associated with the overall on-the-water survey and aerial survey comparison

Activity	Focal Parameter(s)	Secondary Parameter(s)	Sample Unit(s)	Finest Estimation Time Step	Comments
Dockside Creel Sampling	Fishing effort (boat & angler trips); kept and released fish	Catch rates (CPUE); length, age, and CWT composition of harvest ¹ ; collection of angler fishing methods.	Angler trip; kept fish; reported fish release	Two weeks	Creel estimates were produced for two-week estimation periods and stratified into “weekday” (Mon.-Thurs.) and “weekend” (Fri.-Sun.) day-type strata within weeks. For the weekday stratum we sampled $n=2$ days out of $N=8$ available weekdays per two-week period. For the weekend stratum we sampled $n=2$ days out of $N=3$ available weekend days per week.
Aerial Surveys	Fraction of Area 7 effort (boats) captured in the four-site sample frame via creel surveys (Sample Fraction, f_{ij}).	Total boat counts at assumed peak effort time interval (instantaneous count); spatial distribution of fishing boats in the area.	Boats	Season	Three aerial surveys and on-the-water surveys were concurrently conducted on Jul-11, Jul-19, and Jul-20. Table 9.2 summarizes total boat counts from these surveys along with dockside boat counts from in-sample locations on those days.
On-the-water Surveys	Fraction of Area 7 effort (boats) captured in the four-site sample frame via creel surveys		Boats	Season	Season-wide sample fraction was calculated as the average sample fraction over the 3 individual on-the-water surveys (Table 9.3).
Test Fishing	Size (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook	Chinook length, age, and DNA-based ² stock composition; species composition of non-Chinook encounters	Fish encounter	Season	Due to a short season, and low test fishing and VTR encounters (LM = 30%, LU = 19%, SM = 22%, SU = 30% n=27 test fishing encounters; Table 3.9); a CRC for Encounter ¹ approach was used to estimate encounters (LM=53%, LU=21%, SM=18%, SU=7%, Table 3.12).

Table 9.2 Method 2 estimates of total fishing effort and total salmon catch (harvest and releases) during the 2018 summer Chinook MSF in Marine Area 7 using in-sample proportions from boat surveys. Values may not add exactly due to rounding error. AD = marked (adipose-clipped), UM = unmarked.

ACKNOWLEDGEMENTS

This review of the 2018 summer mark-selective Chinook salmon fisheries in Areas 5, 6, 7, 9, 10, 11, 12, and 13 is the result of the dedicated efforts of several individuals. First, we thank the WDFW Puget Sound Sampling Unit (PSSU) field supervisors and their staff, who successfully implemented comprehensive sampling programs during the summer 2018 Chinook MSFs. The PSSU field staff have conducted the dockside creel surveys, test fishery sampling, on-the-water effort surveys, aerial surveys, voluntary salmon trip report program, angler education, as well as compiled, error-checked, and delivered high-quality monitoring data to enable MSF evaluations. In particular, from Central Sound, we thank Patrick Slim Simpson (Central Sound Sampling Supervisor), Jeff McKee, Kathy Young-Berg, Sue Kraemer, Pete Sergeeff, Toby Black, Mary Raymond, Courtney Adkins, April Bosley, Joel Tietge, Kaili Park, Patrick McGovern, Klayton Harmon, Joe Short, Shelby Miles, Patrick Sparrow, Joshua Younk and Olivia Shutts . From the Strait of Juan de Fuca/Peninsula area, we thank Larry Bennett (Peninsula Sampling Supervisor), Connie Konopaski, Lorena McGovern, Ryan Ollerman, Brandon Kraynak, Michael Davis, Jody Kimmel, Caitlin McNamara, Kristin Woodsmith, Leif Rinearson, Steve Grace, Steve Sapp, Lindsey McKee and Andrew Nutzhorn. From North Sound, we thank Chad Paul (North Sampling Supervisor), Samantha Bund, Marcus Thompson, Dean Toba, Patrick Morrison, Lynn Stricker, Mary Mureau, Angela Foster, Dyanne Dalrymple, Nathan Layman, Trevor James, Jim Repoz, John Edwards, Deborah Sharpe, Tata Brumsickle, James Watson, Kirsten Steinke, Curtis Thompson, Renee Dufek, Jake Kohlenberg and Hailey Jongeward. From South Sound as well as Hood Canal and the Kitsap Peninsula, we thank Justin Terry (South Sound Supervisor), Will Jasper, John Moore, Scott Walker, Cara Crowley, Paul Lorenz, Tom Matthews, Bryan Blazer, John Rohr, Maria Garcia-Rojas, Nancy Franco-Bowman, John Pahutzki, Sharyn Wolfenbarger, Hope Anderson, Fred Bodine, Justin Miller, Carson Swart and Benjamin Stillman. Additionally, we thank WDFW pilots Marty Kimbrel, Stephen Lindberg and Kevin Nelsen and samplers Brant Boelts, Karen Kloempken, Marisa Litz, and Lea Ronne for their time surveying Areas 6, 7 and 9 from the sky.

At the WDFW Headquarters in Olympia, we thank Gil Lensegrav and the CWT Lab staff for their help and expertise in providing decoded CWT data. Brant Boelts and Ellie Heikkila provided substantial help with quality control and flow of data, in addition to personnel logistics and support services for the summer 2018 MSF sampling projects. Ann Stephenson supervised staff, ensured continued funding for and oversaw the sampling unit. Karen Kloempken supervised some sampling unit staff, provided timely in-season creel estimates, scheduled all boat surveys and aerial surveys, and worked with the WDFW Selective Fisheries Biologist, Ty Garber, to produce post-season analyses and reports, managed the WDFW sampling databases and provided finalized post-season data. Are Strom completed “R” programming updates and database development to enable efficient analyses of selective fishery data and produce tables and figures for our post-season selective fishery reports.
